EDUCATION

University of California, Los Angeles

Los Angeles, CA

Bachelor of Science, Computer Science

June 2025

- University Cumulative GPA: 3.3
- Relevant Coursework: Data Structures, Algorithms and Complexity, Computer Networking, Operating Systems, Software Engineering, Computer Architecture, Logical Design of Digital Systems, Intro to Machine Learning

WORK EXPERIENCE

Layup Parts

Huntington Beach, CA

Software Engineering Intern - *React, TypeScript, HTML, CSS, Go, Docker, REST API, Neo4j*

June 2025 - Sept 2025

- Implemented new features for an internal-facing web application using React, TypeScript, and CSS, streamlining workflows for machinery monitoring and increasing real-time visibility into machine statuses and alerts
- Designed RESTful APIs in Go to interface with a Neo4j database, writing optimized Cypher queries that reduced query execution time by 15% and improved backend responsiveness.
- Applied UI/UX updates that consolidated multi-page views into a single streamlined interface, eliminating repetitive manual workflows for technicians and reducing manual inputs by 50%.
- Built a real-time telemetry dashboard for a CEAD 3D printer using Pub/Sub architecture and MQTT, cutting manual data entry by 33% and reducing reporting latency by 20%.
- Introduced frontend testing using Cypress and implemented automated test suites, increasing code coverage by 50% and improving bug detection by 20% before release.

SimpleHuman

Torrance, CA

Software Engineering Intern - *React, JavaScript, HTML, CSS, AWS S3, Retool*

July 2023 - Sept 2023

- Set up a daily integration with multiple APIs to ensure databases are in sync, reducing wasteful operations by 10%
- Engineered a marketing campaign portal with automated template and image generation, integrating AWS S3 for asset storage and reducing campaign creation time by 20%.
- Implemented automated click-tracking and engagement reports, refreshing every hour, which reduced reporting delays by 66% and allowed marketers to quickly iterate on campaign messaging.

PROJECTS

PriceTrack Chrome Extension - *TypeScript, HTML, CSS, Go, Docker, AWS EC2, Supabase*

Nov 2025 - Dec 2025

- Developed a full-stack Chrome extension for price tracking using Go and TypeScript, supporting authenticated users and persistent item tracking across any e-commerce website.
- Built and deployed a Dockerized REST API on AWS EC2 with Supabase for PostgreSQL storage and auth.
- Designed a user-driven DOM selection and robust scraping flow to reliably extract prices from dynamically structured product pages.

Merge Tactics Bot - *Python, PyTorch, OpenCV, NumPy*

Oct 2025 - Nov 2025

- Developed a fully autonomous gaming agent by implementing a Deep Q-Network in PyTorch using ADB commands, resulting in a bot capable of independently playing "Merge Tactics".
- Engineered a real-time computer vision pipeline using OpenCV and NumPy to accurately parse game state from screen captures, enabling 95% detection accuracy from the agent.

Wii Tanks Replica - *JavaScript, HTML, CSS, GLSL, WebGL, TinyGraphics*

Apr 2024 - June 2024

- Collaborated in a team of 3 to architect a teammodular Object-Oriented game loop, utilizing a finite state machine to manage complex game states and entity lifecycles
- Optimized rendering performance by managing entity pools for high-frequency objects like bullets and particles, reducing garbage collection overhead and increasing frame rate by 50%

SKILLS

Languages: Python, TypeScript, Go, React, HTML, CSS, SQL, Cypher, C, C++, Rust, Bash, PowerShell, Haskell

Technologies: Git, Linux, WSL, React, PostgreSQL, Docker, AWS, Supabase, MongoDB, Neo4j, Expo, CMake
